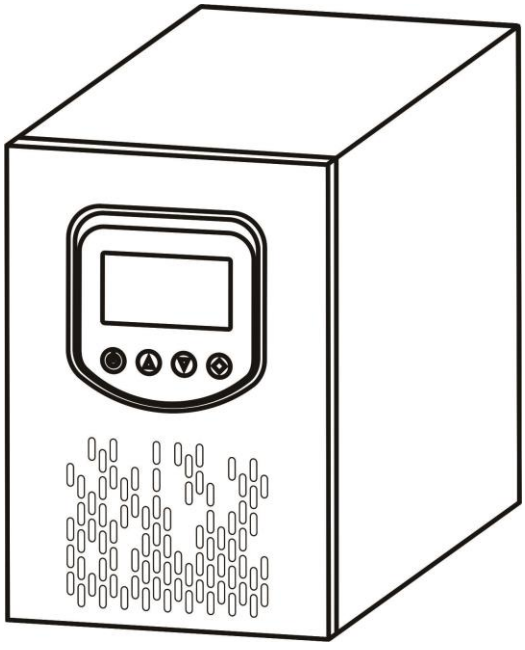
SNADI®

User Manual



FTB series 1KW

Dear Customers

It’s very grateful to you for trusting our company and selecting our products! Before using this product, please read carefully this user manual, including installation, using, failure investigation and other important information and suggestion, we also suggest you keep this manual well!

Catalogue

1 Product Features

● Excellent performance because of double MCU intelligent control technology.
● Settable mains supply preferred mode and battery preferred mode for flexible using.
● Settable charge current and multiple threshold voltages for meeting the selection of the different types of batteries.
● Settable output voltage and frequency, making it convenient and practicable.
● Settable unattended function, good for wide range of application scenarios.
● Pure sine wave output, suitable for various types of loads .
● Intelligent cooling device, efficient and energy-saving.
● LCD real-time display of equipment information and operating status.
● Overall protection and alarm functions, safe and reliable.

2 Installation and storage Guide

（1） Unpacking Inspection

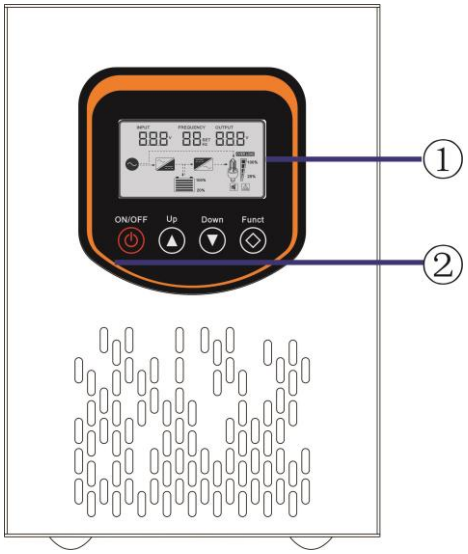
1.1 Open the package, inspect product accessories, including:1 host,1 piece user manual
1.2 Inspect whether the machine have been damaged during the transport or not, If it have some damage, don’t start the machine, contact the logistics company and dealer.

（2） Installation、Storage Notes

2.1 The product installation should be operated by professionals，or assisted by dealer.
2.2 If it needs to transport machine, please take proper protection measures; move the machine from low temperature environment to high temperature environment，may appear droplet, please keep it dry and ensure safety.
2.3 Don’t let the machine exposure in damp, inflammable and explosive or large accumulation of dust environment. Don’t cover and block vents, please preset above 10cm air circulation clearance so that having a good cooling.
2.4 It is battery switch must be shut down when the equipment is not connected with the grid and not being used

3 Equipment appearance graphical representation guide

（1）Equipment appearance view



（2）1KW view of equipment appearance

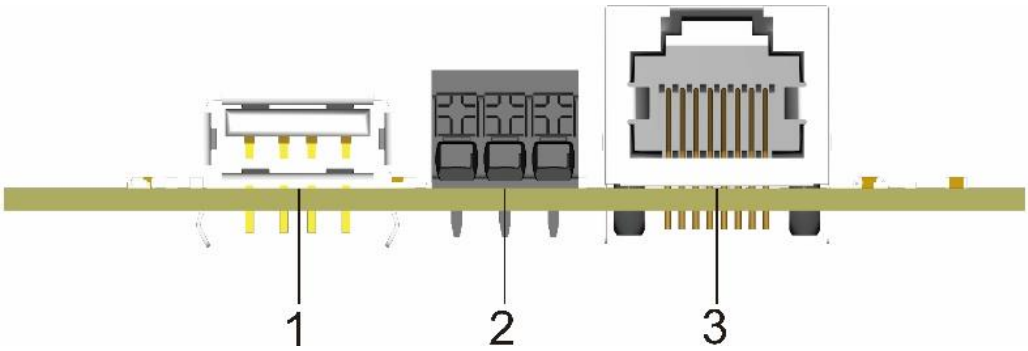
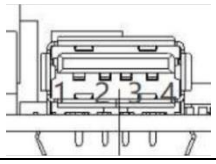
Description of central control board



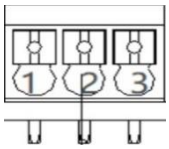
Central control board			
NO	**Symbols**	**Description**	**Type**
1	CN1	USB interface (WIFI/RS232)	USB-TYPE-A
2	CN2	Dry connect (Dry junction)	
3	CN3	RJ45 (RS485 network interface)	RJ45

[1] CN1: USB (WIFI/RS232)



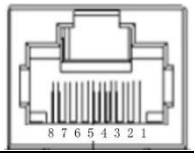
NO	**Symbols**	**Description**
1	+ 5V	+ 5V Power (5V serial power supply)
2	RS.232. RX	Serial Wire Debug
3	RS.232. TX	Serial Wire Clock (Serial Debug Clock Interface)
4	GND	Ground

[2] CN2: Dry connect (Dry junction)



NO	**Symbols**	**Description**
①	NC	NC (Normally Closed Interface)
②	COMMON	Common
③	NO	NO (normally open interface)

[3] CN3: RJ45 (RS485 network interface)



NO	**Symbols**	**Description**
1,8	RS485-B	485-B Communication interface
2,7	RS485-A	485-A Communication interface
3	GND	Ground
4	NC	NC (Normally Closed Interface)
5	NC	NC (Normally Closed Interface)
6	GND	Ground

4 Operating instructions

4.1 Panel LCD display graphical representation instruction

The LCD is on the front panel of the inverter and consists of four buttons and an LCD screen, displaying the working status and information of the inverter.

4.1.1 Description of buttons

Button Function		Instruction
⏻	ON/OFF	On/off button single control
▲	UP	Short press to view inverter parameters in the main interface, short press to increment in the setting interface.
▼	Down	Short press to view the inverter parameters in the main interface, and short press to reduce in the setting interface.
◇	Funct	Under the main interface, press and hold for less than 5 seconds to enter the setting interface, under the setting interface, press and hold to confirm the parameters.

4.1.2 LCD Display Icon Description

Icon	**Function description**	
parameters information		
AC	Indicates the AC input	
INPUTBATTEMP AC INV PV 8.8.8 KW VA %C	AC input voltage	
88 SET	Indicates the setting programs.	
MOD 88	Working mode	
OUTPUTBATLOAD 8.8.8 KWH VA Hz %	AC Output Voltage, Battery Voltage, Load Capacity, Output Frequency	
Battery icon instruction		
LCD display	Status	Battery voltage values/12V；*A（pcs）
	Twinkle	＜10.5V;*A
	Lighten	10.5～11.2V;*A
	Lighten	11.2～11.6V;*A
	Lighten	11.6～12.1V;*A
	Lighten	12.1～12.5V;*A
	Lighten	＞12.5V;*A

4.1.3 LCD display main interface and instructions

View the LCD main interface by pressing the "Up" or "Down" key to switch in turn, the information includes: working mode, AC input/output voltage, battery voltage, output frequency, load capacity,etc.;

Selectable information	LCD display
Input voltage / Output voltage (Default display interface)	Input voltage=220V, Output voltage=220V Input voltage / Battery voltage	Input voltage = 220V, Battery voltage=48.0V Input Voltage / Output Frequency	Input Voltage=220V，Output Frequency=50Hz Input voltage / load power	Input voltage =220V, load power=0.81KW. Input voltage /Display of the remaining power time of the lithium battery (this interface will be displayed only when the lithium battery protocol is selected and communication is established)	Input voltage =220V, Display of the remaining power time of the lithium battery=2H. 
4.1.4 LCD parameter setting

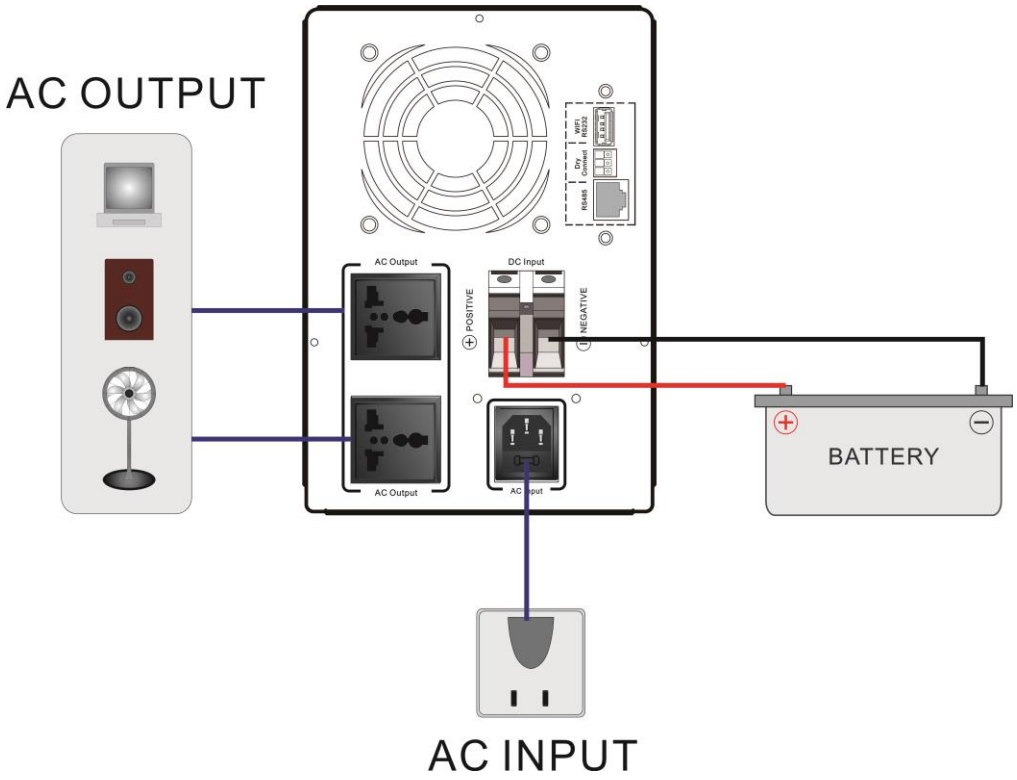
When receiving the lithium battery cell or total voltage one undervoltage alarm, the inverter turns off the AC output and reports E06.</td></tr>
</table>

5 Equipment wiring diagram guide

（1）Input/Output wiring diagram



（2）Direction for using of wire diameter

Direction for using of battery, AC input/output wire diameter: (Compute depends on 1mm^2 copper core with 4-5A current)

$$\text{Battery wire diameter} = \frac{\text{Rated power(W)}}{\text{Rated battery(V)} \times 5\text{A/mm}^2}$$

$$\text{AC wire diameter} = \frac{\text{Rated power(W)}}{\text{Rated AC voltage(V)} \times 5\text{A/mm}^2}$$

For example：Wire diameter of 5000W/48Vdc/220Vac as below.

$$\text{Battery wire diameter} = \frac{5000\text{W}}{48\text{V} \times 5\text{A/mm}^2} \approx 20(\text{mm}^2)$$

$$\text{AC wire diameter} = \frac{5000\text{W}}{220\text{V} \times 5\text{A/mm}^2} \approx 6(\text{mm}^2)$$

6 Care and Maintenance

（1）This series products only need rarely care, battery only need keeping charging so that can get expected lifetime.

（2）If the equipment will not be used for long-term, we suggest it should be charged 1 time every 4~6 month. Usually, the battery can be used for 3~5 years, if it has some problem, then the battery should be changed as soon as possible. When changing battery, it must be operated by professional and obey battery supplier indicate.

（3）Before changing the battery, it must be closed equipment and break away from the grid, close the battery switch. Take off the metal objects such as rings.

（4）Connect the battery line, tiny spark in joint belongs to the normal phenomenon, and will not cause harm to the personal safety and equipment. Never connect the battery positive and negative into short or the reverse.

7 Error code and solution

Error code	Faulty	Solution
E01	Overcurrent of MOSFETS board	Kindly contact sales if still having this issue after restarting
E02	Output short circuit	Check whether it's overloaded seriously or short circuit inside appliances loaded
E03	Appliance Overloaded	Check whether it's overloaded, and remove some loads not important
E04	Inner Over-temperature	Check whether fan is working well or the air dust for cooling be blocked
E05	Overvoltage of battery	Check whether battery connection and configuration correct
E06	Battery's voltage is lower than shutdown voltage	Make sure battery be fully charged, or replace new battery
E07	Reverse connected cables between transformer with heatsink on power board	Fix the two cables after they are interchanged
E08	Start Protection when low output voltage	Kindly contact sales if still having this issue after restarting
E09	Reserved	----------
E 10	Undervoltage of battery	Check the system voltage of inverter and use same data for the battery pack.

8 Judgment and treatment for simple faults

Warning: High voltage inside the device! Do not open it by yourself, or try to do maintenance, so as not to be in danger!

Fault	Possible causes	solution
Time degradation of Machine with loads	Battery undercharge	Make sure battery be full of charging normally
	Machine connect load overcharge	Move away non-key loads
	Battery burn-in and can't charge enough power	Please contact with CSR and get battery need changing module
The machine can't be started	The grid input line or battery input line is in bad connect	Check and reconnection
Starting up alarm	Low battery	Make sure battery be full of charge normally
	Overload	Move away non-key loads
Buzzer for 2s, pause 1s	Internal over-temperature	Check fan and hear dissipation whether be blocked
Fan sometimes fast, sometimes slow	Internal temperature above 45℃ fan fast, below 42℃ fan slow	Normal

When you contact with engineers, please provide the following information: machine model/problem date/complete description of the problem (including indicator status, battery specification, all of the connection etc).

9 Technology Parameter

Type：FTB-		1KW	
Rated power		1000W	
Battery	Rated voltage	12V	24V
	Charge current (can be set)	0-25A	0-15A
Input	Voltage range	73-138VAC/145-275VAC	
	Frequency	45-65Hz	
Output	Voltage range (can be set)	100/110/120(VAC)	
		200/210/220/230/240(VAC)	
	Frequency	50/60Hz±1% (Inverter mode)	
	Output wave	Pure sine wave	
	Switching time	＜10ms(typical load)	
	Efficiency	＞85%（80% Resistance load）	
	Overload	110-120%/60s;120-130%/10s; 130-150%/2s;>150%/500ms	
	Protection	Battery overvoltage/low voltage, overload, short circuit protection, overtemperature protection, etc.	
Operating ambient temperature		0-40℃	
Storage ambient temperature		-15 - +50℃	
Operating/Storage ambient		0-90℃ No condensation	
Machine Size: L*W*H (mm)		316*149*215	
Package size: L*W*H (mm)		380*225*295
